

# RESEARCH2REALITY

Shining a light on research & innovation.

## **Power to the (Innovative) People!**

Transcript of Voiceover Narration

There are many questions about the future of energy: How do we keep the lights on? How can we keep our air clean? Can we find alternatives to fossil fuels?

Can we do better?

Canadian university researchers are making a difference. The energy of the sun is being captured more effectively by newly designed nanoparticles. Algae are being farmed as an alternative source to fossil fuels. Fuel cell membranes are being optimized to drive the electric car industry.

Canadian university researchers are driving us into the future. Come meet them!

TODAY'S RESEARCH. TOMORROW'S REALITY.
