## Seeking Real Cures For Broken Hearts

| Transcript of Voiceover narration

It's vital to your existence. It's the core of how your body functions. It drives you. The heart feeds each part of us.

Canadian University researchers are making a difference. They are exploring ways to grow heart cells in labs for transplantation and drug screening. They are investigating whether genetics holds the answer to sudden death syndrome. They are transplanting hearts in our newborns so they can thrive.

Canadian University researchers are keeping our hearts healthy. Come meet them.
